

60 Days Left for MBA CET 2026 – Complete Preparation Strategy & Study Plan

Only 60 days left for MAH MBA CET 2026, this blog is your **ultimate action plan** — covering daily schedules, sectional targets, mock test planning, and revision strategies to maximize your score and percentile.

1. Understanding the MBA CET 2026 Exam

Before diving into the strategy, here's a quick snapshot of the exam structure:

- **Total Questions:** 200
 - **Duration:** 150 minutes
 - **Sections:** Logical Reasoning, Abstract Reasoning, Quantitative Aptitude (QA), Verbal Ability & Reading Comprehension (VARC)
 - **Marking Scheme:** +1 for each correct answer, **no negative marking**
 - **Key Focus:** Speed + Accuracy > Concept memorization
-

2. Phase-Wise 60-Day Prep Plan

To make your prep efficient, break the 60 days into **3 core phases**:

Phase 1 — Days 1–20: Build Strong Foundation

Goal: Complete core concepts + sectional basics

Daily Structure

- *Quant:* 60–90 min fundamentals (Arithmetic, Algebra, Geometry)
- *Logical + Abstract Reasoning:* 60–75 min puzzles, sequences
- *VARC:* 40–60 min RC + grammar practice

Actions

- ✓ Cover high-weight topics in each section first
- ✓ Start solving **topic-wise tests**
- ✓ Daily revision of formulae and common question types
- ✓ Keep a notebook for formulas, tricks, vocabulary

Phase 2 — Days 21–40: Start Preparing With Mocks

Goal: Build speed and get used to exam pattern

In this phase, start integrating mock tests. Don't wait for "complete syllabus" — do them now to understand your strengths and weaknesses.

First shift to **sectional mocks** (Logical, Quant, VARC)

Analyze every mistake — categorize into concept, calculation, or careless error

Weekly Routine

- 3–4 Sectional tests
- 1 Full-Length Mock (simulate real exam timing)

- Review weakness areas using **topic tests**

Mock analysis is where growth happens — not just taking them

Phase 3 — Days 41–60: Mock Marathon + Revision

Goal: Convert preparation into consistency

Now is the time to go heavy on full-length mocks and strategic practice:

Plan:

- **2–3 full mock tests per week**
- **Daily review** (error logs, revisiting weak topics)
- Mini-revision sessions for **formulae, tricks, and vocabulary**

Focus on:

- ✓ Time-management in each section
- ✓ Attempt order & section strategy (e.g., tackle easier questions first)
- ✓ Exam day simulation (no distractions, strict 150-minute schedule)

3. Mock Test Strategy That Works

Mocks aren't just tests — they are **learning tools**.

When to take mocks

- Start with **sectional tests** early before full mocks
- Increase full mocks gradually as test day approaches

How to analyse mocks

- ✓ Maintain an **error log**
- ✓ Note patterns (consistent weak questions/topics)
- ✓ Re-solve all incorrect & skipped questions

Track **accuracy trends**, not just total score. High attempts with low accuracy aren't helpful — prioritize precision first then speed.

4. Common Mistakes to Avoid

- ✗ Treating CET as CAT — CET focuses more on **speed + quick reasoning**
- ✗ Taking too many mocks too early
- ✗ Skipping review of mistakes
- ✗ Ignoring Abstract Reasoning (scoring opportunity)

Conclusion

With **60 days left**, a **structured plan + smart mock strategy + disciplined daily execution** can significantly boost your MBA CET performance.

The key is: **Plan early, practice regularly, analyse deeply, revise systematically.**

You've got this!
