

1. Is 3 Months Really Enough for JBIMS?

Yes. Multiple TTP students started **in January** and still ended up at JBIMS with **99.8–99.9+ percentiles**.

- Ashray – Started in January → **99.90**
- Bhagyash – Started on 8th Jan → **99.81**, now at JBIMS MMS
- Akash – Started on 11th Jan → **99.81**
- Nikita – Started end of December → **99.29**
- Karan – Started Dec–Jan window, cracked CET

Their complete day-wise activity (mocks, area tests, questions solved) is logged inside the **CET Toolkit**, which you can use to design your own plan.

The message is simple: **starting in January is not a disadvantage**—if you work with intensity and structure.

2. The 3 Pillars: Concepts, Practice, Mocks

For the next 3 months, everything in your prep should revolve around just three pillars:

1. **Concepts** – Finish and solidify your syllabus

(you can check full detailed syllabus here with all the important topics

<https://thetoppercentile.co.in/mba-cet-2026-important-topics/>)

2. **Practice** – Close the “practice gap” with topic/area tests
3. **Mocks** – Build exam temperament, rank, and strategy

If any of these three is missing, your score plateaus—no matter how many hours you put in.

Pillar 1: Concepts (First 8–10 Weeks)

You have roughly **13 weeks** before CET First Attempt and about **19 weeks** before the Second Attempt. That’s more than enough if you are deliberate.

How Much Time Each Area Needs

Based on TTP and founder’s own journey:

- **Quant (32 topics)** – ~8 weeks

- **Logical Reasoning (27 topics)** – ~8 weeks
- **Verbal + Abstract** – ~2–3 weeks combined

You don't need to follow anyone's fixed topic order. Use the **CET Syllabus Tracker** (with topics marked High / Medium / Low priority) and pick 3–4 high-priority topics each week in Quant and 2–3 in LR.

How to Study a Topic (Non-negotiable 3-Step Method)

For every topic:

1. **Read the concept**
 - From TTP e-books or any good book you have.
 - Don't start with videos—start by reading and understanding.
2. **Solve solved examples**
 - Work them out yourself, not just glance through solutions.
3. **Attempt practice questions / topic tests**
 - Solve at least **50 questions per topic** over time.
 - Then revisit the same set 2–3 times.

At first, you may get **3/10** correct. That's normal.

Re-attempt after going through solutions, and your accuracy will move towards **5–6/10**, then **8–9/10**.

That repetition is what allows you to solve the same logic in **45 seconds in CET instead of 2–3 minutes**.

Pillar 2: Practice Gap – Area & Sectional Tests

TTP analysed data from **23,500+ rows** of student performance: mocks given, area tests, sectional tests, total questions solved vs final CET rank.

Key insight: **Between two mocks, you must give at least 5–6 area/sectional tests—** otherwise your score doesn't improve.

If You're Scoring < 100 in Mocks

Out of 200 questions, at least 100 are either wrong or unattempted.

This means your **concepts are not ready**.

- Focus on **concepts + topic-wise tests**

- After each mock, list the topics where you lost marks
- Take **area tests** and **topic tests** on those specific areas

If You're Scoring 100–120

One or two sections are holding you back.

- Identify your weakest section (say LR or QA)
- Increase **area tests + sectional tests** for that section
- Mocks: **1–2 per week** is enough at this level.

If You're Scoring > 120

Your fundamentals are decent. Now you must work on **strategy**.

- Take **sectional tests**:
 - QA 50Q / 60 min
 - LR 75Q / 60 min
- Use these to experiment with:
 - Question selection
 - Attempt order
 - Time split

Mocks: **2 per week** is generally sufficient; more only if analysis quality remains high.

Pillar 3: Mocks – How Many and How to Use Them

Mocks are **not** for practice; they're for **performance analysis**.

Mock Frequency (January–CET)

Based on your current score:

- **<100** – 1 mock/week (January to March)
- **100–120** – 1–2 mocks/week
- **>120** – 2 mocks/week (can go slightly higher near the exam if analysis is strong)

Every mock must be followed by:

- Error categorisation – silly mistakes, conceptual gaps, time-pressure errors
- Identification of weak topics → add to area-test list

- Comparison with toppers via **Mock Leaderboard** to see:
 - Section-wise score gap
 - Total marks gap and where it's coming from

Your target in each mock: **aim for Top 5 ranks on the leaderboard.**

If you're Rank 20, calculate how many marks you're behind Rank 1 in each section and fix that through focused tests.

4.The 3-Month JBIMS Roadmap: Month-wise View

Month 1 (Jan): Concept-Heavy, Mock-Light

- Finish **60–70%** of high-priority syllabus
- **Mocks:** 1 per week
- **Area/Sectional Tests:** At least 5 per week between two mocks

Focus: building concepts + starting speed.

Month 2 (Feb): Balance Concepts + Practice

- Complete remaining concepts (medium-priority topics)
- Increase **area tests and sectional tests**
- **Mocks:** 1–2 per week (depending on score band)

Focus: identify pattern of mistakes, stabilise 120+ score.

Month 3 (Mar / till Attempt 1): Strategy + Mock Marathon

- Concepts mostly done; only quick revision
- **Mocks:** 2 per week (more if you can still analyse deeply)
- Slot-wise PYQs + mixed area tests

Focus: push from **120–130 → 140+**, optimise attempt order, accuracy, and speed.

5.Weekly Target Template

For the next 12–13 weeks, use this simple weekly checklist:

- **1 Full Mock**
- **5+ Area / Sectional Tests**
- Daily concept/practice on 1–2 topics

- Re-attempt incorrect questions after solution review

Try this for **2–3 weeks** and watch if your mock scores jump. If they do, keep going exactly like this.

6. Why This Plan Works

When TTP compared toppers vs others on the Mock Leaderboard, the difference boiled down to just **three gaps**:

1. **Conceptual gap** → fixed by reading + solved examples + topic tests
2. **Practice gap** → fixed by area/sectional tests and repeating questions
3. **Mock strategy gap** → fixed by mocks + sectional tests and leaderboard analysis

Your entire 3-month journey should be about systematically reducing these three gaps.

Final Word: 3 Months to JBIMS Is Hard, But Real

This exact framework—**concepts → practice → mocks**, with weekly targets and score-band-based mock planning—is what JBIMS converts and your founder himself used after starting in January.

If you follow it with honesty for the next 3 months:

- 99+ percentile is very realistic
- **99.9–99.99 percentile and JBIMS/SIMSREE** is absolutely possible

Structure your weeks, track everything in the **CET Toolkit**, and use the **Mock Leaderboard** to see where you stand against future JBIMS batchmates
